The Ozone Convertible,22": An Ultra-light
Convertible Carryon with Wheels 0 Share

At only 6 pounds 2 ounces, the **Ozone convertible 22"** represents the latest offering from Osprey Packs, Inc. This extremely lightweight piece of **luggage** is the maximum carry-on size and can easily be hoisted into overhead racks on board trains and planes. The nylon fabric may look lightweight but it's quite sturdy and can sustain the rigors of travel without ripping.

The Ozone convertible's high road LT™ chassis and ergonomically-designed extendable handle enable one to wheel it around airline terminals and urban pavements with ease. Also, padded handles allow one to carry this piece of luggage should one chose to do so. For those instances when using wheels or carrying one's luggage is not optimal, an adjustable/removable harness and a modified/removable straight ErgoPull™ hipbelt allows travelers to carry the convertible as a large backpack. An optional zip-off daypack that includes a padded laptop/tablet sleeve and internal organization can be attached to the convertible and then removed for use as a daypack.

Open up the Ozone Convertible to reveal a very organized internal system including a large j-zip opening, zippered sidewall pockets, three large internal zip pockets, main compartment compression straps and a mesh front flap pocket. An external zip top pocket provides easy access to frequently needed items especially that quart size bag holding one's TSA approved liquids.

The Ozone Convertible is available in Light Green and Light Blue. For those looking for a larger suitcase, this model also comes in a 28" size.
