Osprey Nebula: A Rugged Laptop Backpack for the Modern Nomad

Osprey Packs has long been a mainstay of backpackers worldwide. With good reason as their packs are durable, stylish, lightweight and cleverly designed.

Their latest **Nebula Backpack** is built with modern nomads in mind. The primary feature that sets it apart from other Osprey packs is that it's TSA-approved, meaning there's no need to remove your laptop when going through security. The laptop sleeve simply unzips to lay completely flat on the x-ray belt.

Other features include: a heat embossed stash pocket, side stretch mesh pockets to secure extra gear, a front panel organization pocket, an easy-access padded sleeve to keep your electronics safe and secure and a sturdy top grab handle. All packaged into a compact (19" x 11" x 11") and lightweight (just 2.2 pounds) form factor.

Pricing + Availability

Available now in Black, Brick Red and Marsh Green for around \$110 (USD) from [Amazon](#). Also available in the **women's specific Nova daypack!**
